

Nickel P-Pellets™ (CDN)

Nickel P-Pellets™ are a high purity form of nickel widely used for electroplating with titanium anode baskets. P-Pellets™ are produced by a unique carbonyl gas refining process at the Copper Cliff Nickel Refinery in Sudbury, Canada.

The controlled and consistent purity of P-Pellets™ and the advantages associated with its distinctive shape make this product ideal for general purpose plating with titanium anode baskets:

- Carbonyl refining produces the purest form of nickel available
- Unique shape prevents the formation of bridges and voids in the basket
- Settles uniformly in basket, ensuring uniform current density and high quality deposits
- Flows easily into regular and shaped baskets with standard mesh sizes
- Ideal for use with automated basket loading devices
- Safe to handle (no sharp edges)
- Dissolves at 100% anode efficiency in common nickel plating solutions (containing chlorides)

Dissolution produces a small amount of metallic residue which can be contained using cloth anode bags.

P-Pellets™ are produced in compliance with the following ISO standards: ISO 9001:2008.

Typical Specifications

Form

- Spherical pieces of nickel
- Diameter: approximately 8 - 12 mm

Packing Density

Approximately 5.3 g/cm³ of basket capacity

Packaging

- 10 kg bags, 5 bags per box, 20 boxes per pallet (1,000 kg net weight)
- 1 tonne bulk bags
- 2 tonne bulk bags

Chemical Analysis (wt %)

Ni*	>99.98
Co	<0.00002
Cu	<0.00004
C	<0.007
Fe	<0.0006
S	<0.0001
Pb	<0.000002
Zn	<0.00002

*Nickel determined by difference.

**10 kg bags, 5 bags per box,
20 boxes per pallet**
